SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	04/19/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

ED

<b>Office Action Summary</b>	<b>Application No.</b> 09/771,870	<b>Applicant(s)</b> MCGEE ET AL.	
	<b>Examiner</b> Baoquoc N. To	<b>Art Unit</b> 2162	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 25 January 2007.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-24 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-24 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### DETAILED ACTION

1. Claims 1-24 are pending in this application.

### *Response to Arguments*

2. Applicant's arguments filed 01/25/2007 have been fully considered but they are not persuasive.

Applicant argues "Alexander fails to teach that the searching is performed by a searchable recorder to which the user provides key objects. Alexander is totally silent with regard to this feature of the instance invention as Alexandria teaches the viewer performing the search."

The examiner respectfully disagrees with the above argument. The language such as "Alexander fails to teach that the searching is performed by a searchable recorder to which the user provides key objects" are not in the claim 1.

Applicant argues "the combination of Alexander and Masahiro teaches all the element recited in the independent claims as Alexander fails to teach providing the key object information to a searchable video recorder and Masahiro fails to provide any teaching to correct this deficiency."

The examiner respectfully disagrees with the above argument. As explain in the argument in last office action. Alexander discloses a method searching the Internet document using the objects from the TV program. Alexander in unpreferred embodiments which indicate the invention can be arrangements may be devised by one skilled in the art arrive the concept of the main invention. This suggestion of various

Art Unit: 2162

and numerous arrangement are suggested by Masahiro where Masahiro discloses the system including EPG to search for the TV programs using the extracted keywords "Golf", "Ozaki twin" and a "driver" from the documents on the Internet (paragraph 0024, 1-6). The motivation is to allow the EPG to conduct the search with the identified objects from the Internet document to retrieve the TV related to the object of search.

Other independent claims 13 and 19 having the similar subject matter as to claim 1; therefore, claims 13 and 19 are rejected under the same reason.

Other dependent claims depended on claim 1, 13 and 19 are rejected under the same reason as to their independent claims.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-10, 12-13, 15-16, 18-21 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alexander et al. (US. Patent No. 6,117,931 B1) in view of Masahiro et al. (JP 2000-307993 11/02/2000).

Regarding on claim 1, Alexander teaches a method for searching for television programs comprising the steps of:

Art Unit: 2162

sending said at least one key object to a search capable video recorder (col. 19, lines 5-7); and

conducting a key object search with said search capable video recorder to locate at least one television program that contains said at least one key object (col. 19, lines 7-11).

Alexander does not explicitly teach identifying at least one key object in at least one Internet document by means of a personal computing device that initiated a request for said at least one Internet document, wherein said key object represents a topic of interest and said at least one Internet document is not related to said television program. However, Masahiro discloses "the three phrases "golf", the "Ozaki twin", and a "driver" were extracted from the file object as a description keyword. A television race card is searched an OR for these words. Consequently, the TV program which contains a keyword of one of the above in the program title (explanation of a program) is search..." (paragraph 0024, lines 1-6). These extracted keywords from the web document are used for a search to retrieve the television program. The Internet document and the television program are not related; the relationship here is the keywords "golf", "Ozaki twin" and "driver" between the Internet document and television program. Additional, in the conventional search and retrieval system whether to search for Internet documents and/or television programs, the keywords are used to retrieve Internet documents and/or television programs. Further, Masahiro also discloses the concept compiling the extracted keywords "Golf", the "Ozaki twin" and a "driver" (paragraph 0024). Therefore, it would have been obvious to one ordinary skill in the art

Art Unit: 2162

at the time of the invention was made to modify Alexander's system to include utilizing the extracted keyword from the web document to search for the television programs as taught by Masahiro in order to allow the user to use different tools to retrieve additional information by retrieving television programs.

Regarding on claim 2, Alexander do not explicitly teach the method recited in claim 1 further comprising the step of: identifying a plurality of key objects in at least one Internet document; placing said plurality of key objects in a list of key objects; sending said list of key objects to said search capable video recorder; and conducting a key object search with said search capable video recorder to locate at least one television program that contains at least one key object in said list of key objects. However, Masahiro discloses: identifying a plurality of key objects in at least one Internet document ("golf", the "Ozaki twin" and a "driver"); placing said plurality of key objects in a list of key objects ("golf", the "Ozaki twin" and a "driver"); sending said list of key objects to said search capable video recorder (sending the list to the EPG for searching); and conducting a key object search with said search capable video recorder to locate at least one television program that contains at least one key object in said list of key objects (a search for TV program is conducted) (paragraph 0024, lines 1-6). Therefore, it would have been obvious to one ordinary skill in the art at the time of the invention was made to modify Alexander's system to search for TV programs using the grouping of the extracted keywords as taught by Masahiro in order to have more chances to retrieve TV programs.

Regarding on claim 3, Alexander teaches the method of recited in claim 2 comprising the step of: increasing the number of said plurality of key objects in said list of key objects by adding key objects to said list that are similar to said plurality of key objects in said list of key objects (more than one new items) (col. 19, lines 30-31).

Regarding on claim 4, Alexander teaches the method recited in claim 1 further comprising the steps of: providing search results of said key object search to a viewer (co. 19, 5-7), said search results identifying at least one television program that contains at least one key object (col. 19, lines 7-10); selecting at least one television program that contains at least one key object in response to a viewer instruction (col. 19, lines 33-34); and recording in said search capable video recorder said at least one television program selected by said viewer (col. 19, lines 9-10).

Regarding on claim 5, Alexander teaches the method recited in claim 1 further comprising the steps of: receiving in said search capable video recorder search results of said key object search, said search results containing at least one television program that contains at least one key object (col. 19, lines 30-37); and

Recording in said search capable video recorder at least one of the television program identified in said search results (col. 19, lines 30-37).

Regarding on claim 6, Alexander teaches the method recited in claim 5 further comprising the steps of: using a selection criterion to select at least one television program from said search results to be recorded (col. 19, lines 30-37).

Regarding on claim 7, Alexander teaches the method recited in claim 6 wherein said selection criterion comprises one of: selecting only those television programs that

Art Unit: 2162

will be shown in a particular time period, selecting only those television program that are deemed to be the most relevant to a particular topic, selecting all television programs that appear within a search results until the disk space limit of a search capable video recorder has been reached, selecting television program that may be overwritten by said search capable video recorder, and selecting television programs that may not be overwritten by said search capable video recorder (col. 20, lines 15-20).

Regarding on claim 8, Alexander teaches the method recited in claim 5 further comprising the step of: recording in said search capable video recorder all of the television programs identified in said search results (col. 19, lines 30-37).

Regarding on claims 9, 15 and 20, Alexander teaches the method recited in claim 1 wherein said key object search is conducted for a predetermined period of time (col. 19, lines 5-7).

Regarding on claims 10, 16 and 21, Alexander teaches the method recited in claim 1 wherein said key object search identifies at least one television program using program identification information (col. 19, lines 7-10).

Regarding on claims 12, 18 and 23, Alexander teaches the method recited in claim 1 wherein said search capable video recorder comprises one of: a video recorder with a hard disk memory, a television set with a video recorder with a hard disk memory, a set top box with a video recorder with a hard disk memory, a video cassette recorder with a hard disk memory, and a personal computer with a video card (col. 3, lines 1-10).

Claim 13 is rejected under the same reason as to claim 1, in addition Alexander also discloses providing search results of said key object search to a viewer said search

Art Unit: 2162

results identifying at least one television program that contains at least one key object in response to a viewer instruction (col. 19, lines 30-31); and recording in said search capable video recorder said at least one television program selected by said viewer (recording) (col. 19, lines 31-34).

Claim 19 is rejected under the same reason as claim 1, in addition Alexander also discloses a plurality of key objects (new items) (col. 19, lines 30-31).

4. Claims 11, 17 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alexander et al. (US. Patent No. 6,177,931 B1) in view of Masahiro et al. (JP 2000-307993 11/02/2000) and further in view of Cargun et al. (US. Patent No. 5,481,296).

Regarding on claims 11, 17 and 22, Alexander and Masahiro do not explicitly teach the method recited in claim 1 wherein said key object search identifies at least one television program by analyzing at least one video stream of at least one television program to find objects that match the key object used in said key object search. However, Cargun teaches key object search identifies at least one television program by analyzing at least one video stream of at least one television program to find objects that match the key object used in said key object search (col. 16, lines 62-67 to col. 17, lines 1-12). Therefore, it would have been obvious to one ordinary skill in the art at the time of the invention was made to modify Alexander and Masahiro system to include key object search identifies at least one television program by analyzing at least one video stream of at least one television program to find objects that match the key object

Art Unit: 2162

used in said key object search as taught by Cargun in order to retrieve the most relevant program for viewing.

5. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Alexander et al. (US. Patent No. 6,177,931 B1) in view of Masahiro et al. (JP 2000-307993 11/02/2000) and further in view of Geer et al. (US. Patent No. 6,788,882 B1).

Regarding on claim 14, Alexander and Masahiro do not explicitly teach conducting said key object search in said search capable video recorder in television programs that have previously been recorded in said search capable video recorder (col. 11, lines 32-38). However, Alexander teaches conducting said key object search in said search capable video recorder in television programs that have previously been recorded in said search capable video recorder (col. 11, lines 32-38). Therefore, it would have been obvious to one ordinary skill in the art at the time of the invention was made to modify Alexander and Masahiro system to include conducting said key object search in said search capable video recorder in television programs that have previously been recorded in said search capable video recorder as Geer in order to provide the retrieval or the record television program for later viewing.

6. Claim 24 is rejected under 35 U.S.C. 103(a) as being unpatentable over Alexander et al. (US. Patent No. 6,177,931 B1) in view of Masahiro et al. (JP 2000-307993 11/02/2000) and further in view of Milnes et al. (US. Patent No. 6,118,492)

Art Unit: 2162

Regarding on claim 24, Alexander and Masahiro do not explicitly teach notifying said viewer when said search capable video recorder has recorded said at least one television program selected by said viewer. However, Milnes teaches notifying said viewer when said search capable video recorder has recorded said at least one television program selected by said viewer (col. 5, lines 41-48). Therefore, it would have been obvious to one ordinary skill in the art at the time of the invention was made to modify Alexander and Masahiro system to include notifying said viewer when said search capable video recorder has recorded said at least one television program selected by said viewer as taught by Milnes in order to notify the user to further viewing the recorded television program.

### ***Conclusion***

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Baoquoc N. To whose telephone number is at 571-272-4041 or via e-mail BaoquocN.To@uspto.gov. The examiner can normally be reached on Monday-Friday: 8:00 AM – 4:30 PM, EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Breene can be reached at 571-272-4107.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks  
Washington, D.C. 20231.

Art Unit: 2162

The fax numbers for the organization where this application or proceeding is assigned are as follow:
